

# Bronson Healthcare Prior Authorizations 2022

Certain prescription drugs are subject to prior authorization and must be preapproved before they will be a covered drug. Express Scripts pharmacists regularly review the most current research on newly approved and existing medications, and consult with independent licensed doctors and pharmacists to determine which medications have been proven to be effective. Please work with your doctor on the appropriate medication for you. Prior authorization phone lines are open 24/7 – so a determination can be made right away.

You can check the coverage and price of medications by calling Express Scripts, using the website at [Express-Scripts.com](http://Express-Scripts.com) or through the mobile app. This list is subject to change.

# Bronson Healthcare Step Therapy 2022

A panel of independent licensed physicians, pharmacists and other medical experts work with Express Scripts to recommend medications for the step therapy program. Together, they review the most current research on thousands of prescription drugs tested and approved by the Food and Drug Administration (FDA). Then they determine the most appropriate drugs to include in the program. Medications are then grouped in categories, or “steps.”

**First-line medications** – These are the first step and are typically generic and lower-cost brand-name drugs. They are proven to be safe and effective, as well as affordable. In most cases, they provide the same health benefit as more expensive drugs, but at a lower cost.

**Second-line medications** – These are the second and third steps and are typically brand-name drugs. They are best suited for the few patients who don’t respond to first-line medications. They’re also the most expensive options.

You can check the coverage and price of medications by calling Express Scripts, using the website at [Express-Scripts.com](http://Express-Scripts.com) or through the mobile app. This list is subject to change.

# Bronson Healthcare Quantity Limits 2022

The FDA, medical researchers and drug manufacturers look at individual medications to determine a recommended maximum quantity considered safe. This is especially important for drugs that are challenging to take in the proper dose such as inhalers or nose sprays. These medications are then added to a drug quantity management program. Your plan decides which of these medications are covered.

You can check the coverage and price of medications by calling Express Scripts, using the website at [Express-Scripts.com](http://Express-Scripts.com) or through the mobile app. This list is subject to change.

ABSTRAL	ALLEGRA CHILDREN'S	ASMANEX HFA
