Patient Name:

Date of Birth:

This information is given to you so that you can make an informed decision about having **knee replacement surgery**.

Reason and Purpose of the Procedure:

A knee replacement is an operation done to treat the pain and stiffness associated with arthritis of the knee. Your doctor will replace the damaged surfaces of the knee with an implant that is made of metal and plastic. It may be attached to your bone with acrylic cement. The goal of the knee replacement is

- Reduce pain
- Improve function

Benefits of this surgery:

You might receive the following benefits. Your doctor cannot promise you will receive any of these benefits. Only you can decide if the benefits are worth the risk.

- Reduced pain
- Improved function during normal activities
- Improved quality of life
- You may be able to reduce the need for pain medication

Risks of Surgery:

No procedure is completely risk free. Some risks are well known. There may be risks not included in the list that your doctor cannot expect.

General Risks of Surgery:

- **Small areas of the lungs may collapse.** This would increase the risk of infection. This may need antibiotics and breathing treatments.
- **A strain on the heart or a stroke.**
- **Bleeding may occur.** If excessive, you may need a blood transfusion.
- **Reaction to the anesthetic.** The most common reactions are nausea and vomiting. In rare cases, death may occur. The anesthesiologist will discuss these with you.

Risks of this surgery:

- **Infections are rare, but serious when they occur.** They can require additional surgery and antibiotics to treat. Sometimes the new knee needs to be removed to cure the infection.
- **The device can loosen or wear over time.** This can become painful and require additional surgery to treat the problem.
- **Damage to nerves and arteries can occur.** Nerve damage can cause numbness or weakness in the leg. Artery damage can cause excessive bleeding and require repair.
- **Blood clots.** Clots may form in the legs, with pain and swelling. These are called DVTs or deep vein thrombosis. Rarely, part of the clot may break off and go to the lungs. This can be fatal.
- **Failure to relieve symptoms.** There is a chance that the surgery will not relieve the pain or stiffness in your knee.
- **Robotic Assisted:** Some surgeons use a robot when doing knee replacement surgery. If the robot is used, your incision will be the same. Pins are used to stabilize the robot to the knee during surgery. There is a rare risk of bone fracture.

Patient Name:

Date of Birth:

Risks Associated with Smoking:

Smoking is linked to an increased risk of infections. It can also lead to heart and lung complications and clot formation.

Risks Associated with Obesity:

Obesity is linked to an increased risk of infections. It can also lead to heart and lung complications and clot formation.

Risks associated with Diabetes:

Diabetes can increase the risk of infection, slow wound healing and slow bone healing.

Risks Specific to You:

Alternative Treatments:

Other choices:

- Do nothing- you may decide not to have the procedure.
- Pain management (medications)
- Steroid injections

If You Choose Not to Have this Treatment:

- Your doctor can discuss the alternative treatments with you

General Information:

- During this procedure, the doctor may need to perform more or different procedures than I agreed to.
- During the procedure the doctor may need to do more tests or treatments.
- Tissues or organs taken from the body may be tested. They may be kept for research or teaching. I agree the hospital may discard these in a proper way.
- Students, technical sales people and other staff may be present during the procedure. My doctor will supervise them.
- Pictures and videos may be done during the procedure. These may be added to my medical record. These may be published for teaching purposes. My identity will be protected.

Medical Implants

Federal laws and rules require patients to be notified of problems with medical devices. The hospital will keep a record of the implant used during surgery, and will use this information to locate me if there is a problem.
